PROVIDING FEEDBACK ON RED HAT DOCUMENTATION

We appreciate your feedback on our documentation. Let us know how we can improve it.

Submitting feedback through Jira (account required)

1. Log in to the Jira website.

2. Click **Create** in the top navigation bar

3. Enter a descriptive title in the **Summary** field.

4. Enter your suggestion for improvement in the **Description** field. Include links to the relevant parts of the documentation.

5. Click **Create** at the bottom of the dialogue.

PREFACE

The Package manifest document provides a package listing for Red Hat Enterprise Linux 10.0.

Capabilities and limits of RHEL 10 as compared to other versions of the system are available in the Knowledgebase article Red Hat Enterprise Linux technology capabilities and limits .

Information regarding the RHEL life cycle is provided in the Red Hat Enterprise Linux Life Cycle document.

Detailed changes in each minor release of RHEL are documented in the Release notes.

Changes to packages between RHEL 8 and RHEL 9, as well as changes between minor releases of RHEL 9, are listed in Considerations in adopting RHEL 9 .

Application compatibility levels are explained in the Red Hat Enterprise Linux 9: Application Compatibility Guide document.

CHAPTER 1. RED HAT ENTERPRISE LINUX 10 CONTENT

1.1. REPOSITORIES

Content in Red Hat Enterprise Linux 10 is made available through the following content repositories:

- BaseOS

- AppStream

- CodeReady Linux Builder

- Supplementary

In addition, specific content is available through the Red Hat Enterprise Linux Add-on repositories:

- High Availability

- Resilient Storage

1.2. TYPES OF CONTENT

There are two primary types of Red Hat Enterprise Linux 10 content.

1.2.1. Traditional content

Traditional content is released as RPMs and is, unless specified otherwise, supported for the life of the release in accordance with the Red Hat Enterprise Linux Life Cycle .

1.2.2. Application Streams

Certain user space components distributed in the AppStream repository are Application Streams. Application Streams are delivered on a cadence that is suitable for each package, which makes the distribution diversified. Application Streams offer multiple versions of a single package for installation within RHEL 9, which is an improvement over previous methods of making multiple versions of packages available. RHEL 10 also consolidates previous distribution channels to a single place.

Depending on the needs of the individual Application Stream, packaging for these components is implemented in a number of forms:

- RPMs

- Modules

- Software Collections.

For detailed information on the length of Application Streams support, see the Red Hat Enterprise Linux Application Streams Life Cycle. For information about the other components or packages in the AppStream repository, see the Scope of Coverage Details document.

CHAPTER 2. REPOSITORIES

2.1. THE BASEOS REPOSITORY

Content in the *BaseOS* repository is intended to provide a core set of the underlying OS functionality that provides the foundation for all installations. This content is available in the RPM format and is subject to support terms similar to those in previous releases of Red Hat Enterprise Linux. For more information, see the Scope of Coverage Details document.

The following table lists all the packages in the BaseOS repository along with their license and application compatibility level.

2.3. THE CODEREADY LINUX BUILDER REPOSITORY

The *CodeReady Linux Builder* repository contains additional packages for use by developers. This repository is available with all Red Hat Enterprise Linux subscriptions but does not need to be enabled on your runtime deployments. Packages included in the CodeReady Linux Builder repository are unsupported. For more information, see How to enable and make use of content within CodeReady Linux Builder.

The following table lists all the packages in the CodeReady Linux Builder repository along with their license.

2.3.1. Modules in the CodeReady Linux Builder repository

The following table lists packages in the CodeReady Linux Builder repository by module and stream. Note that not all packages in this repository are distributed within a module. For all packages in the CodeReady Linux Builder repository, see Section 2.3, "The CodeReady Linux Builder repository" .

Module	Stream	Application Compatibility Level	Packages	
swig	4.1	4	swig, swig-debuginfo, swig-debugsource, swig-doc, swig-gdb	

2.4. THE SUPPLEMENTARY REPOSITORY

The *Supplementary* repository includes proprietary-licensed packages that are not included in the open source Red Hat Enterprise Linux repositories. Software packages in the Supplementary repository are not supported, nor are the ABIs guaranteed. Issues arising from packages belonging to the Supplementary repository are not supported. For more information, see the Support policy of the optional and supplementary channels in Red Hat Enterprise Linux.

The following table lists all the packages in the Supplementary repository along with their license.

Package	License	RHEL 10 Minor Release Version
zhongyi-song-fonts	Commercial	10.0

2.5. THE HIGH AVAILABILITY ADD-ON

The *High Availability* add-on provides on-demand failover services between nodes within a cluster. The add-on is available with a separate subscription. For details, see the Support Policies for RHEL High Availability Clusters.

The following table lists all the packages available with the High Availability add-on along with their license and application compatibility level.

2.6. THE RESILIENT STORAGE ADD-ON

The *Resilient Storage* add-on enables a shared storage or clustered file system to access the same storage device over a network through a pool of data that is available to each server in the group. The add-on is available with a separate subscription. For details, see the Support Policies for RHEL Resilient Storage - Subscriptions, Support Services, and Software Access.
